Minor Project

Boosting

Complete an end-to-end project using any suitable Kaggle dataset - no code template provide

1. Project Goal

Select **any suitable dataset from Kaggle** and complete an end-to-end project that shows how you understand the data, find useful insights, and solve a clear problem

2. Dataset Selection Rules

- Choose a dataset that is understandable and has enough rows and columns for meaningful analysis.
- Avoid copied classroom datasets unless you add a different question, approach, or insight.
- Check the dataset description, column meanings, source, and license before starting.
- Do not select a dataset with mostly empty, duplicate, or unusable values.

3. Work to Complete

1. **Define the problem:** Explain what you want to discover or predict and why it matters.
2. **Understand the data:** Describe the rows, columns, target variable, and important features.
3. **Check data quality:** Identify missing values, duplicates, incorrect data types, and unusual values.
4. **Prepare the data:** Clean the dataset and clearly document every important decision.
5. **Explore and visualize:** Use meaningful charts and summary observations, not charts without explanation.
6. **Choose the approach:** State whether the task is data analysis, classification, regression, clustering, or another valid problem
7. E**valuate the result:** Use suitable measures and explain what the result means in simple language.
8. **Conclude:** Summarize key findings, limitations, and possible future improvements.

4. Submission Checklist

- ■ Project notebook or project file with clear headings

© 2025 UnloxAcademy. All Rights Resereved.

Made by recycled paper, because we care.

- Kaggle dataset link and short dataset description
- Problem statement and project objective
- Data-cleaning summary
- At least 4 meaningful visualizations with observations
- Method/model explanation and evaluation
- Final conclusion in your own words
- README or one-page report explaining the project

5. Presentation Guidelines

- Presentation time: 5-7 minutes.
- Explain the problem, dataset, key findings, result, and limitations.
- Do not read every line from the notebook.
- Be prepared to answer: Why this dataset? Why this method? What did you learn?

6. Evaluation - 100 Marks

Area	Marks
Problem definition & dataset choice	15
Data understanding & cleaning	20
EDA, visualizations & observations	20
Method/model selection	15
Evaluation & interpretation	15
Conclusion, originality & presentation	15

Important: The project must be your own work. You may use references, but you must understand and explain every decision. Copy-pasted projects without explanation will not be accepted.
